

# Percona Provides Cyberfuel With a High Availability Database Solution and Advanced Support

**Cyberfuel**.com

## About the company

**Cyberfuel** offers electronic billing software in the cloud for professionals and service companies, as well as development and integration of web software, web hosting, and email for customers' websites. Cyberfuel's mission is to provide high-quality and stable services for their clients.

## The challenge

In a competitive market, it is crucial that Cyberfuel can offer and provide a good service at a lower price point. In order to stay ahead of the competition, Cyberfuel needs to ensure that its underlying data performs at the optimum level and stays highly available.

## The solution

To minimize unexpected downtime and data loss, Percona implemented source/replica replication for **Percona Server for MySQL**, ensuring Cyberfuel benefited from a stable, scalable, and highly available open source database solution.

Cyberfuel also counts on Percona Advanced Support and feels confident that Percona MySQL experts are on hand to quickly review and provide solutions to issues as they occur. This ensures Cyberfuel can provide their customers with a seamless user experience.

## Working with Percona

Cyberfuel has trusted in the expertise and quick response of Percona for many years. Database knowledge and solutions enable Cyberfuel to offer a great service to their customers, who benefit from the secure and stable platforms that Percona has helped to create and maintain.

**“** Percona provided stability and reliability to our MySQL database by implementing source/replica replication. Their highly qualified support staff always gives us fast and efficient attendance.

**Fabio Castillo,**  
IT Manager, Cyberfuel

### Cyberfuel used Percona to:

- Implement a high availability solution
- Provide fast, responsive support with Percona Advanced Support
