

Percona delivers database environment solutions:

eCommerce/SaaS

“Guaranteeing database performance is key to making sure our web applications are responsive and up-to-date. Percona Care Ultimate helps us to achieve these objectives.”

-- Pavel Genov, Head of Software Development at Pepper.com

Telecommunications

“Percona’s experts understand that the database needs to match business growth, and helped us to guarantee our customers an excellent experience even as we scaled up our market share.”

-- Paul Carter-Brown, CIO at Smile

Social Media

“At Wattpad we ... need reads, writes, and our database workload to match our Amazon RDS provisioning. Percona helped us to validate that queries were tuned correctly, and that we were getting the most out of our cloud environment.”

-- Ray Slakinski, Lead Developer, Operations at Wattpad

Gaming

“Percona technology and services are helping us make our infrastructure more reliable and scalable while ensuring optimal performance and controlling cost.”

-- Sean Chighizola, Senior Director Database and NOC at Big Fish Games

Percona

Champions of Unbiased Open Source Database Solutions

Percona is the only company that delivers enterprise-class software, support, consulting and managed services solutions for MySQL®, MariaDB®, MongoDB® and other open source databases across traditional and cloud-based platforms. Percona maximizes application performance while streamlining database efficiencies.

As an open source company, we value providing the best solution for our customers, regardless of their database architecture or platform. Being “technology agnostic” means that we can give you the right solution to address your database needs, without chaining you to specific software – preventing “vendor lock-in.”

Our global 24x7x365 support and consulting experts have worked with over 3,000 clients worldwide, including the largest companies on the Internet, who use open source database platforms on premises or in cloud environments (such as Google Cloud Services, AWS, Atlas, etc.).

Percona has decades of experience solving complex database and database performance issues and design challenges. We attract the best and brightest database technical experts to contribute to our team.

Percona’s experts provide industry-leading database support, consulting and management services:

- **Build.** Percona’s industry-leading architecture design consultants have the expertise to build databases in hosted and private, public and hybrid cloud environments that are optimized and scale for growth while minimizing application downtime and operational costs.
- **Fix.** Percona’s 24x7x365 support experts provide troubleshooting to solve database and server instability, data recovery, performance, response and outage issues, as well as proactive systems monitoring and alert responses.
- **Optimize.** Percona’s industry-recognized performance experts can maximize your database, server and application performance, lower infrastructure costs and provide capacity and scalability planning for future growth.
- **Manage.** Percona’s managed services team can augment your staff with trusted data advisors to provide project management, best practices for database operations, secure data backups and remote infrastructure management.

Percona was rated as a “Top Value” and “Highest Overall” in customer satisfaction among 30 vendors in [Gartner’s 2015 Magic Quadrant for ODBMS](#).

Percona Software

Percona develops its own version of MySQL and MongoDB, along with other software tools to help create the best database architecture for your needs. Our software is free and open source, with no open core or business source licenses.

- **Percona Server for MySQL.** [Percona Server for MySQL](#) is a free, fully compatible, enhanced, open source drop-in replacement for MySQL that provides superior performance, scalability and instrumentation. It also includes enterprise-grade features and functionality
- **Percona Server for MongoDB.** [Percona Server for MongoDB](#) is a free, enhanced, fully compatible, open source, drop-in replacement for the MongoDB Community Server that includes enterprise-grade features and functionality.
- **Percona XtraDB Cluster.** [Percona XtraDB Cluster](#) is an active/active high availability and high scalability open source solution for MySQL clustering. It integrates [Percona Server](#) and [Percona XtraBackup](#) with the [Codership Galera](#) library of MySQL high availability solutions in a single package that enables you to create a cost-effective MySQL high availability cluster.
- **Percona XtraBackup.** [Percona XtraBackup](#) is a free, open source, complete online backup solution for all versions of [Percona Server for MySQL](#), MySQL and MariaDB. Percona XtraBackup performs online non-blocking, tightly compressed, highly secure backups on transactional systems so that applications remain fully available during planned maintenance windows.
- **Percona Monitoring and Management.** [Percona Monitoring and Management \(PMM\)](#) is a free and open-source platform for managing and monitoring MySQL, MariaDB and MongoDB performance. It provides thorough time-based analysis for MySQL, MariaDB and MongoDB servers.

Percona is a well-known contributor to open source MySQL and MongoDB code, and has developed and added MySQL and MongoDB Enterprise features to the open source community for many years. Our developers actively work with our customers to solve MySQL and MongoDB bugs, and contribute those solutions to the community.

History

Percona was founded in August 2006 by Peter Zaitsev and Vadim Tkachenko and now employs a global network of experts with a staff of over 145 people. Percona attracts and hires only the best database technical expertise to help solve our customers' database issues.

The [Percona Performance Team](#) includes experienced members and experts from the open source database community.

Our customer list is large and diverse and we have one of the highest renewal rates in the business. Our expertise is visible in our widely read [Percona Database Performance blog](#), Peter's book [High Performance MySQL](#), our [Percona Live Open Source Database Performance Conferences](#) and our [Practical MySQL Performance Optimization](#) ebook.
