

# About Percona: Unbiased Open Source Database Experts

Percona is a market leader, providing best-of-breed enterprise-class software, support, consulting, managed services, and training for on-premise and cloud-based open source databases. Percona has extensive expertise advising on multi-vendor, multi-platform, and multi-cloud environments.

We help companies simplify, manage, deploy, and optimize their database environments.

Working as a trusted and unbiased partner, we enable them to meet the expanding needs of their customers, eliminate lock-in, increase agility, and boost business growth.

Percona was founded on the belief that everyone should have access to scalable, secure, efficient, and resilient database software features, without inflated fees or vendor lock-in. Our global network of experts spans over 35 countries and we have assisted over 3,000 clients worldwide.

## Percona Services

### Percona Support

Percona Support provides comprehensive, responsive, and cost-effective database support to help you guarantee application performance by ensuring your database meets performance and up-time requirements. We provide help, expertise, and real-world experience on all types of database environments, including those that use a combination of different software and architectures.

### Percona Managed Services

Not all companies want to maintain a full-time in-house team to keep their databases operating at the highest level. Percona Managed Services provides database support at a fraction of the cost of a dedicated, full-time DBA, providing 24x7x365 database monitoring and response. Offering deep operational knowledge of open source databases and cloud platforms, our tailored managed database services help you lower costs and manage complexity.

### Percona Consulting

Our trusted advisors have decades of experience solving complex database performance issues and design challenges. We offer innovative migration solutions, whether you are on-premise looking to move to the cloud, or locked-in to a vendor and wanting to explore open source software. Our consultants work remotely or on-site, as needed, and we can provide full-time or part-time interim staff to cover employee absences or give extra help as needed. We offer the best solution for your database environment, without bias, enabling you to meet your business objectives.

### Percona Training

We provide tailored MySQL, MongoDB, MariaDB, PostgreSQL, and open source database training programs that provide you with database configuration knowledge, best practices, and backup and recovery techniques. These are available on-site, virtually, or in locations worldwide.

## Percona Software

In the open core model, certain software features are locked-off until you pay for a more advanced feature-rich version.

At Percona, we believe that everyone should have access to cutting-edge features which protect their business and enhance performance. We aim to provide, and support, the best open source database software available.

We have developed and released a variety of market-leading [open source software](#) including [Percona Server for MySQL](#) and [Percona Server for MongoDB](#), our compatible, enhanced, free, drop-in replacements for the Community versions. Our software includes Enterprise-comparable features, usually only available in paid-for versions.

We offer [Percona Distribution for PostgreSQL](#) and [Percona Distribution for MongoDB](#), where the best and most critical components, designed and tested to work together, are available as easy-to-deploy solutions.

Additionally, our cutting-edge [high availability](#), [back-up](#), and [monitoring](#) software can be used to ensure your databases are performing at the highest level.

## Our Customer-First Approach

Percona regularly shares open source software expertise with the community and frequently runs events and webinars. These include the widely-read [Percona Database Performance Blog](#), co-founder [Peter Zaitsev](#)'s book *High Performance MySQL*, our annual [Percona Live](#) Open Source Database Conferences, and upcoming and past free [technical webinars](#).

Although Percona software is available, we pride ourselves on being “software agnostic.” This means that we will help you find the best open source database solution for your business, regardless of the software or version that you are running. This includes MySQL, MariaDB, MongoDB, or PostgreSQL.

So, while we hope that you choose to use Percona’s software, you can be confident that Percona will support you either way, offering advice and practical assistance to ensure you get the very best performance from your databases.
