Why Percona?

Percona drives open source database performance and scale like no one else:

- Faster Performance

- Increased Uptime

- Maximum ROI

- Fewer Revenue Interruptions

- More Robust and Scalable Applications

Whether its enabling developers or DBAs to realize value faster with tools, advice, and guidance, or making sure applications can scale and handle peak loads, Percona is here to help.

Percona has helped thousands of customers running their applications in the cloud achieve better performance, better cost savings, and better ROI.

Percona Professional Services for AWS

The role of the DBA is shifting; while traditional on-premises DBAs primarily focus on operational tasks with little time left over for application-focused work, the cloud DBA is able to focus on higher value, revenue-centric goals at the application and performance level. This cloud DBA role requires the highest level of expertise with the least room for error.

Percona offers consultants who has years of industry experience in database administration, design, and architecture and are experts in Amazon Aurora, Amazon RDS, and Amazon EC2 solutions.

Solutions for Your AWS Environment

Build A New MySQL-Based Application on AWS

Get set up for success when building a new solution in the cloud:

- Design databases to meet business requirements

- Ensure applications are scalable, secure, and performant

- Choose the right engine and instance types to balance cost and performance

Migrate Existing MySQL Applications to AWS

Get help with migrating MySQL or MongoDB databases to AWS:

- Optimize your database and choose the right AWS components to match your needs

- Design your new cloud deployment for security, performance and cost effectiveness

- Plan and execute your migration with minimal impact to the business

- Provide training and tools to help you maximize your ROI

Rescue an Existing Cloud Deployment

Improve a slow or underperforming database:

- Identify and fix configuration issues, query issues, and application slowdowns

- Perform a deep dive review of application and database infrastructure to identify the issues

- Help you migrate to one of our industry-leading best practice solution architectures with a solid and stable database environment

- Provide ongoing reviews and optimization services to ensure workload changes won't cause unwanted results

Improve Database and Application Performance and Stability

Slowdowns, outages, and bottlenecks can derail your big marketing and sales plans. Get ahead of potential issues and ensure increased load does not result in an outage:

- Find and eliminate performance bottlenecks

- Design for efficient growth and scale

- Plan for major events that cause application traffic spikes

Reduce Cloud Costs

Keep your database costs from spiraling out of control:

- Ensure cloud deployments don't allocate more services and resources than needed

- Prevent misconfigured databases, bad design and inefficient queries from doubling the cost of a cloud database deployment

- Ensure that simple cloud design decisions don't lead to extra costs

> "We learned a lot through developing Marketing 360® and in working with the Percona consultant on database and query performance optimization. With the service that Percona offers, I'm not sure that we'll ever have the need to hire our own DBA."

Jeremy Gerk
Head of Development
Madwire

About Percona

Percona delivers enterprise-class software, support, consulting and managed services solutions for MySQL, MariaDB, MongoDB, and PostgeSQL and other open source database software and applications across traditional and cloud-based platforms.
