

Percona Operator for MySQL

Access the digital cheatsheet at percona.com/k8s
Documentation: docs.percona.com

Deploy and connect

Description	Command
Get database cluster endpoint to connect	<code>kubectl create namespace <NAMESPACE_NAME></code>
Switch context to namespace	<code>kubectl config set-context --current --namespace=<NAMESPACE_NAME></code>
Deploy Operator	<code>kubectl apply -f bundle.yaml</code>
Deploy database cluster	<code>kubectl apply -f cr.yaml</code>
List all database clusters	<code>kubectl get pxc</code>
Get root user password	<code>kubectl get secret <DB_CLUSTER_NAME>-secrets -o jsonpath={.data.root} base64 --decode</code>
Get database cluster endpoint to connect	<code>kubectl get pxc <DB_CLUSTER_NAME> -o jsonpath={.status.host}'</code>
Delete database cluster	<code>kubectl delete pxc <DB_CLUSTER_NAME></code>

Backup and restore

Description	Command
Create manual backup	<code>kubectl apply -f backup.yaml</code>
List available backups	<code>kubectl get pxc-backup</code>
Get backup status	<code>kubectl get pxc-backup <BACKUP_NAME></code>
Restore backup	<code>kubectl apply -f restore.yaml</code>
Get restore status	<code>kubectl get pxc-restore <RESTORE_NAME></code>
Delete backup	<code>kubectl delete pxc-backup <BACKUP_NAME></code>

Troubleshoot

Description	Command
Get cluster status	<code>kubectl get pxc <DB_CLUSTER_NAME></code>
Get details about cluster	<code>kubectl get pxc <DB_CLUSTER_NAME> -o yaml</code>
Get all the Pods of cluster	<code>kubectl get pods -l app.kubernetes.io/instance=<DB_CLUSTER_NAME> -l app.kubernetes.io/part-of=percona-xtradb-cluster</code>
Get Operator Pod name	<code>kubectl get pods -l app.kubernetes.io/component=operator -l app.kubernetes.io/instance=percona-xtradb-cluster-operator -o name</code>
Get logs of Operator	<code>kubectl logs -f <OPERATOR_POD_NAME></code>
Get Service resources of database cluster	<code>kubectl get svc -l app.kubernetes.io/instance=percona-xtradb-cluster-operator -l app.kubernetes.io/instance=<DB_CLUSTER_NAME></code>

Percona for Cloud Native

Open source software and services to run cloud-native databases at peak performance.

Get a fully operational open source data platform for Kubernetes with Percona for Cloud Native.

- **Percona Operators** – enterprise-grade MySQL, MongoDB, and PostgreSQL powered by automated Day 1 and Day 2 operations.
- **Percona Monitoring and Management** – an open source monitoring tool to keep database clusters on k8s running at peak performance.
- **Percona Everest** – a self-service, web-based database provisioning tool to enable developer velocity. 100% open source.
- Support, Consulting, Managed Services, and Training for cloud-native database operations.
