

PERCONA MONITORING AND MANAGEMENT

On its own or in tandem with your existing monitor tools, PMM delivers even more value to your Percona customer experience.

Created and backed by a community of 200+ database performance experts, PMM delivers essential, actionable insights into database health — even if you already have a monitoring system in place.

Elevate Your Percona Support Experience with Percona Monitoring and Management (PMM)

► Monitor, manage, and improve database performance

Spot critical performance issues faster, understand the root cause of these problems better, and resolve them more efficiently.

- Resolve database scaling issues
- Mitigate security vulnerabilities
- Monitor uptime and reduce outage potential
- Relieve query bottlenecks and slowdowns

► Get faster resolution for all severity-type tickets

Combine PMM with your Percona Support subscription to reduce the time for engineers to resolve open tickets.

PMM Remote Access: Once PMM is installed, and if granted access, our team can access your PMM instance directly whenever required via an SSH tunnel.

PMM Dump: Don't want to provide remote access? PMM Dump allows you to share monitoring data with the Percona Support team easily and securely.

PMM Snapshot: PMM's snapshot function enables you to securely share data from PMM dashboards with Percona via PMM.

Why Percona

- Open source without lock-in or fine print
- Transparent, upstream, fully auditable software
- Deep multi-database expertise across stacks

Percona delivers open source and source-available database solutions with expert support, ExpertOps, and consulting services, and no licensing lock-in. Customers rely on Percona to run critical MySQL, PostgreSQL, MongoDB, Valkey, and Redis databases across on-premises, hybrid, and multi-cloud environments without licensing costs or vendor lock-in.

► Maximize database efficiency and security

Connect your databases to PMM – with a simple code – and go beyond basic monitoring tools for greater database health and performance.

Avoid manual formula creation and extensive metric analysis with Percona Alerting

PMM's pre-packaged formulas provide a simplified view for alerts, so you can easily spot and track problems..

- Filter alerts
- Reduce unnecessary notifications
- Customize Alerting templates via a user-friendly UI

Get automated insights with Percona Advisors

Resolve issues before they become issues with automated rules built on decades of database expertise. Get recommendations to improve your databases:

- Security posture
- Configurations
- Performance

► Freely available and open source – always

PMM provides users with freedom from vendor lock-in and deployment, as well as limitless scalability. Use PMM with Percona Distributions of MySQL, PostgreSQL, and MongoDB, or connect it to third-party databases with Prometheus exporter.
